

FRIENDS & NEIGHBORS WITH MR. GEORGE

Nature Trails

The Museum's property includes more than 40 acres of hillside that is retained in its natural woodland state. This is where you'll find our nature trail – a well-marked, maintained trail approximately two miles in length. The trail has a variety of inclines, from nearly flat to gently sloping to steep. If you are part of an organization, our trained nature docent volunteers will lead your group on active, informative trail tours.

ACTIVITY

Bisect a Leaf

Challenge yourself to draw the missing half of your leaf

Materials:

Leaves

Scissors

Paper

Glue Stick

Pencil

Crayons or Colored Pencils

- Pick a leaf or leaves that you find interesting. Think about each leaf's shape and texture.
 - Cut or split your leaf in half to be bilaterally symmetrical.
 - Glue your half of a leaf to a sheet of paper.
 - Start by drawing the outline to complete the leaf's shape.
- Observe the colors and textures and see if you can make both halves match by coloring in the outline.

Earl Gray's carved rocks can be found all over the Nature Trails at the Huntington Museum of Art. Create your own and color this example! Don't forget to add moss and bugs!
